

Project Profile

Pharmaceutical Industry

Industrial Automated Systems secured a project with a leading global pharmaceutical contract manufacturer based on our ability to provide a competitive solution meeting the client's expectations within the mandated timeframe. The primary challenge faced was adhering to the target completion date. IAS diligently worked around the clock to ensure timely execution within the client's specified schedule.

The project encompassed implementing controls, panel build, and electrical installation and design for four new packaging lines. IAS employed a modular approach to the electrical installation, enabling Factory Acceptance Testing (FAT) and Validation domestically before disassembly for overseas shipment. IAS accompanied the equipment, overseeing installation, startup and commissioning at its final destination.

Key components integrated into the project included:

- 130+ PowerFlex Drives with EtherNet I/P communications and safety functionality
- Rockwell Automation CompactLogix PLCs
- Rockwell Automation PanelView Plus 7s
- Line sensors, components and safety devices

Innovate. Elevate. Excel.
